Summary

Senior Computer Science major with practical experience in structured data workflows, data analysis, and front end quality assurance within an agile sprint environment. Eager to apply strong analytical problem-solving, system automation, and team-wide communication to support innovative diagnostic and imaging platforms.

Education

Appalachian State University, Boone**,** North Carolina — August 2025 - Expected, May 2027
Bachelors of Science in Computer Science
Certificate in Data Science

Ocean County College, Toms River, New Jersey — September 2019 - May 2021
Associate of Science in Computer Science

Technical Skills

- Python
- SQL
- Java
- Linux
- Bash
- BigQuery
- Tableau
- Postman
- Selenium
- Git

Certifications

Google Data Analytics Professional Certification, Coursera — December 2021

Professional Experience

AI Trainer, Handshake — December 2025 - July 2026
Created and tested prompts to assess large language model (LLM) performance in reasoning and user tasks.
Evaluated LLM outputs for accuracy and depth across instruction-following, reasoning, and context.
Refined AI understanding of human preferences and real-world use cases through expert feedback.

Data Analyst, Gembah, Texas — October 2021 - October 2022
Built interactive Tableau dashboards to visualize key sales, inventory, and logistics metrics.
Authored SQL queries in BigQuery to extract, aggregate, and clean multi-table business data.
Modeled relational datasets to support reporting pipelines and simplify ad-hoc data requests.

QA Tester, Dynasty Sport and Entertainment, Florida — October 2018 - March 2019
Executed system verification tests to validate feature releases against strict QA standards.
Documented reproduction steps to streamline bug triaging and speed up developer turnaround.
Escalated software risks early to cross-functional teams, ensuring smooth release cycles.

Technical Projects

Esports Performance Data Scraping Pipeline
Automated browser extraction using Selenium to scrape match statistics and player metrics from esports database website.
Parsed nested web elements into structured JSONL datasets to generate clear data visualizations and summary reports.

Serverless Event-Driven Notification System
Configured Cloudflare Workers with automated Cron Triggers to execute scheduled weekly notification jobs.
Constructed JSON payloads and dispatched automated Discord webhook alerts during weekly game reset cycles.

Organizations

Team Sunergy Electrical Team Member — September 2026 - present
Onboarding with electrical engineering leads to support custom embedded and PCB development for subsystems.
Communicating and coordinating with adjacent engineering subteams to align electrical requirements with vehicle priorities.
Attending team-led technical workshops to build core knowledge in mechanical and electrical systems and safety protocols.

Appalhack website Organizer — November 2025 - March 2026
Built responsive event website from scratch using HTML, CSS, and JS, deployed via GitHub Pages.
Engineered custom HTML forms with webhook integration, replacing third-party data collection.
Coordinated event director to align website updates with registration timelines.

Teacher of STEM, **Ocean View Academy** — August 2024 - April 2025
Assisted students with computer science topics and college-level math, including HTML, CSS, JavaScript, and calculus.
